Part 1

Always carry the microscope with two hands, one supporting the base and the other holding the arm.

Remember not to touch the lenses with your fingers.

To clean the lenses, rub them gently with a clean, soft, cotton cloth or with lens paper.

Functions:

**Eyepiece:** The eyepiece contains an ocular lens that is marked with a number and an X. This represents the number of times the lens magnifies an object.

**Focus adjustment knob:** Turn this knob to focus the image.

**Stage:** The stage supports the slide you want to examine under the microscope.

**Clips:** The clips holds the slide in place.

**Light Source:** To see an object clearly, you need to direct a source of light on the object.
